

August 17, 1950.

Dr. Don Boone,  
Dept. Plant Pathology,  
University of Wisconsin,  
Madison 6, Wisconsin.

Dear Boone-

You may remember when you were writing your thesis that I suggested some relationships between various ascus segregation types based upon nuclear passing after the second meiotic division. I have just learned that a similar treatment is in print in a paper by H.L.K. Whitehouse: "Crossing-over in Neurospora", New Phytologist, 41: 23-62 (1942). I would appreciate it if you would substitute this reference for any reference to my suggestion that you possibly might make in any forthcoming publications.

Sincerely,

Joshua Lederberg,  
Associate Professor of Genetics,  
UNIVERSITY OF WISCONSIN.

12/84

1942

Is that likely?
